# Product Features

## QUALITY

All our products are of top quality materials and meet the manufacturing standards and requirements of food service tableware as laid down by British Standard institute, BS 4034.

## SAFETY

All decoration and glazes comply with the regulation of the British Standard BS 6748, on metal and lead release.

## FOOTLESS GLAZED PROFILE

All flatware has footless glazed profile that helps to reduce scratching on the table surface and other wares when they are stacked up.

## EDGE CHIP RESISTANCE

Our products are re-enforced with article rims that guards against chipping even after long duration of use and handling. With spouts and handles that specially designed to minimize breakage, our Vitrified Hotelware are produced from a specially formulated body containing Alumina that adds strength and durability.

## STACKABILITY

Storage space saving is one of the main featured that makes an ideal hotel ware. The closed foot of the flatware assists in the prevention of scratching.

## MICROWAVE SAFE

Our products are microwave safe. Products can even be taken straight out from the freezer into your microwave.

## EXTREME TEMPERATURES

Our Vitrified Hotelware has excellent heat retaining properties due to the very high firing temperatures during processing. Made from non-moisture absorbing materials, it is highly resistant to thermal shock and reduces instances of breakage.

## HYGIENE

Our Vitrified Hotelware is resistant and impervious to water, due to the glazing over the base of the flatware that ensure that water of the absorption of other materials will not occur. Conforming to British Standard BS 4034 which controls the amount of the water absorption allowed in a glazed piece of ceramic ware, our products are also guaranteed to be highly resistant to crazing.

## GLAZE DURABILITY

Stringent control during firing and testing ensures the durability of glazed items. All our wares are resistant to staining and metal marking.

## DISHWASHER SAFE

Our products are developed to be highly resistant to dishwasher under normal dish washing procedures. To maintain the quality of the glaze, it is highly important that only recommended detergents are used and with the correct operating procedures.

## BENEFITS

Footless Glazed Profile

Edge Chip Resistance

Stackability

Glaze Durability

Microwave Safe

Dishwasher Safe

MADE IN MALAYSIA

# Claytan (Underglaze) VS Other (Onglaze)

## Underglaze Decoration - Claytan Method

For underglaze Tableware, the decal is fired at high temperature on the tableware body. Then it is sealed by the glaze layer and fired again at even higher temperature. The result is the decal is permanently protected and no chance at all the color will come in contact with the food → Food safe! And as the decal will not fade, it looks as new at all time!

## Onglaze Decoration Other Method

For onglaze tableware, the decal is fired at lower temperature on the tableware surface, therefore it is not permanent. The decal/color could be removed over some period of usage. It cause the decal will look faded. The removed decal could be swallowed into our stomach. Eating color from the decal that contains lead cadmium will be harmful to one's health.

How to test?

If you can feel the contour of the decal by finger nail on the tableware surface, then a high possibility that the decal is onglaze.

 Claytan® Glazed Foot  
TABLEWARE

CLAYTAN FIRING METHOD

BY BRITISH "3-PIN FIRING"

The pin marks on the bottom of Claytan ware are not defects. They are the marks of pins which are used for supporting the wares during firing. With this unique British "3-Pin Firing" process, we are able to totally glaze the foot of our wares for smooth finishing. Smooth foot tableware will not cause expensive table surface being scratched. It will also not scratch the piece below it when stacked together.

- The contents of the Capsule Base are described in the pots section in the graphic.
- The bottom of the pot contains aluminum-capsule, which provides high and uniform thermal conductivity.
- The pot bottom is pressed with a force over 1500 tons. With this process, a merger of 99% success rate is achieved on the base sheets.
- After pressing, Aluminum base is covered with steel capsule.
- The capsule base, which is carefully covered, guarantees ideal heat dissipation and energy savings. Fast and economical cooking is achieved by providing a balanced distribution of the heat with the pure aluminum material used between the base hair.
- As SOFRAM, we prefer to use SAE 304 Quality Stainless Steel in our production (18cr / 10ni). This substance contains between 18-20% chromium, 08-10% Nickel 2% Manganese 1% Silicon 0.08% Carbon, 0.045% phosphorus, 0.30% and 68.85-72.85% Iron.

Hygiene Fresh is recognized as the World's leading manufacturer, supplier and service provider of a wide range of modern air care and washroom hygiene concerns that meets high standards using innovative technologies and high quality fragrances to create a feel that your audience love. We lead the Middle East market with the ultimate solutions for air care and washroom hygiene solutions and were motivated to establish our own manufacturing company, Hygiene Fresh. Company's vertical orientation to production ensures total quality control of the finished products as all aspects of manufacturing are performed within the company's modern production facilities.
